A Manual Of Practical Laboratory And Field Techniques In Palaeobiology

Synopsis

The user This manual is designed for the use of geo-scientists with an interest and need in developing palaeobiological materials as a potential source of data. To meet this objective practical procedures have been formatted for use by both professional and semi-professional students with an initial understanding of palaeobiological research aims as a primary source of scientific data. I have attempted to provide an explanation and understanding of practical procedures which may be required by students undertaking palaeobiological projects as part of a degree course. The layout of this manual should be particularly beneficial in the instruction and training of geotechnologists and museum preparators. Graduate students and scientists requiring an outline of a preparation procedure will also be able to use the manual as a reference from which to assess the suitability of a procedure. This manual is also intended for use by the "committed amateur". Many of the techniques described in this manual have been devised by non-palaeontologists, and developed from methods used in archaeology, zoology and botany, as well as other areas of geology. A considerable number of the methods can be undertaken by the amateur, and in the case of many of the field procedures, should be used. This will ensure that specimens and samples can be conserved in such a manner as to facilitate any later research, and not invalidate the results of subsequent geochemical analytical techniques which might be employed.

Book Information

Hardcover: 538 pages

Publisher: Springer; 2001 edition (April 30, 2001)

Language: English

ISBN-10: 041258980X

ISBN-13: 978-0412589805

Product Dimensions: 6.1 x 1.2 x 9.2 inches

Shipping Weight: 2.2 pounds (View shipping rates and policies)

Customer Reviews

This book is very well organized and information is easy to find. [...]many of the techniques will be of use to Holocene workers[...] but all geological departments that undertake research should have

a copy for reference. This book will be an invaluable guide to geologists from undergraduate level upwards.[..]But always one must return to the sheer magnitude of the data contained within the 538 pages of this excellent book. It is not just a field techniques and paleobiology laboratory manual, but instead represents a most impressive gathering together of almost everything a successful practical paleobiologist needs to be effective. [...]This manual has managed to fill a gap in the market, which has existed for several years. In the last few decades developments in paleobiological field and laboratory techniques have generally been published as booklets or papers. Green has successfully brought these together here, to produce what will be valued by many as a standard reference on the subject. ' Caroline Buttler, National Museums and Galleries of Wales in Holocene
