Customer Reviews

A very good update to the classic that was first published in 1935 and its subsequent newer editions. (several of which I still have in my shop) If you ever read any of Samuel Miller's neon columns in Signs of the Times then you will greatly appreciate this book! It is one of the more comprehensive volumes available on a wonderful, but often unknown or misunderstood technology.

One of the oldest how to books around, but full of great information!

This book given as gift for my boyfriend who has a new appreciation for neon lighting. He has expressed an interest in learning how to repair these lights. Book is very thorough and will by

hunting for more texts on this subject.

GREAT!

This is another book required to complete the Florida electrical exam for lighting maintenance license. The book explains the history and other facts about gas lighting.

One of the best books for people who want to start a neon unit! Very simple to understand! Good illustrations!

Essential reading for those wanting to learn everything about neon sign making/glass bending. Updated edition, focusing on up-to-date technology and removing obsolete info.

A very in depth look into the world of neon. Not a tutorial but an excellent book for those contemplating starting a neon business.
