# Vitruvius: The Ten Books On Architecture (Bks. I-X)

## Synopsis

Marcus Vitruvius Pollio, a Roman architect and engineer flourishing in the first century B.C., was the author of the oldest and most influential work on architecture in existence. For hundreds of years, the specific instructions he gave in his "Ten Books on Architecture" were followed faithfully, and major buildings in all parts of the world reveal the widespread influence of his precepts. According to the Encyclopedia Britannica, he was "the chief authority studied by architects, and in every point his precepts were accepted as final. Bramante, Michelangelo, Palladio, Vignola, and earlier were careful students of the work of Vitruvius." His book is thus one of those rare works that have been supremely important in the creation of the greatest art masterpieces. Vitruvius describes the classic principles of symmetry, harmony, and proportion in architecture; the design of the treasury, prison, senate house, baths, forum, and temples; the construction of the theater: its site, foundations, and acoustics; the proper style and proportion for private dwellings; the differences between the Ionic, Doric, and Corinthian styles; methods of giving durability and beauty to polished finishings; and many other topics that help us understand the methods and beliefs of the Roman architect. It is a direct, authoritative, and detailed introduction to the ancients' methods of construction, the materials of the architect, and the prevailing aesthetic beliefs of the times; but it is also a work of art. Vitruvius wrote in such a fascinating manner, and digressed from his subject so often (as, for instance, when he wrote about the winds, Archimedes in his bath, and why authors should receive awards and honors at least as often as athletes), that his book has had a continuing appeal to the general reader for many centuries. Besides being an instructive treatise on nearly everything connected with Roman and Greek architecture, it is an entertaining description of some aspects of the life and beliefs of the times. This edition is the standard English translation, prepared over a period of several years by Professor M. H. Morgan of Harvard University.

## Book Information

Paperback: 368 pages

Publisher: Dover Publications (June 1, 1960)

Language: English

ISBN-10: 0486206459

ISBN-13: 978-0486206455

Product Dimensions: 5.4 x 0.8 x 8 inches

Shipping Weight: 13.6 ounces (View shipping rates and policies)

Average Customer Review: 4.3 out of 5 stars 54 customer reviews

## Customer Reviews

--This text refers to an alternate Paperback edition.

Marcus Vitruvius Pollio (late 1st century B.C.), was a Roman military architect and engineer, and an expert in ballistic machines in particular. Robert Tavernor studied architecture in London, Rome and Cambridge and practices as a consultant architect. He was professor of Architecture at the universities of Edinburgh and Bath, and is currently Professor of Architecture and Urban Design at the London School of Economics and Political Science (LSE). Richard Schofield read Classics at Oxford in the late 1960s, then architectural history at the Courtauld Institute of Art, London. After working at the University of Nottingham for many years, he moved to the Istituto universitario di architettura di Venezia in 1997, where he is the Professor of the History of Architecture. --This text refers to an alternate Paperback edition.

A wonderful treatise on how to design and build things the right way. In the modern world we are too impoverished to follow his example however. Still a must for those interested in things historical.

great

For a serious student of architecture this excellent "history" value of "why" style, technics, etc., that we use today have developed.

I give it four stars, because the book had too many water marks. It is still readable and in general in good form.

The best book for everyone! Not only for architects.

Every architect must read this book!

Great Book.

genuine.
