## Customer Reviews

Amazing book! This book is required for my medic program and by far is the best learning tool that I own for understanding pharmacology. It breaks down scenarios by explaining what the indicated medicine does and how it acts on the body. Somehow it all just clicks after reading each chapter! Easy to understand and read. Now if it only came with flashcards that pop out like my ECG book. I would easily pay another \$20!

One of the better, if not best, text for pre-hospital providers. Would certainly include it as an adjunct to whatever publisher instructor may be using. One minor shortcoming is the medical math section which perhaps could be expanded somewhat to include "means and extremes" calculations and other alternative methods. Overall great text and I would strongly recommend that anyone having a

problem with pharmacology obtain a copy of Guy's book.

the best book for paramedics who study pharmacology ...hands on explanation for each drug and flash c in the back
