Thimerosal: Let The Science Speak: The Evidence Supporting The Immediate Removal Of Mercury--a Known Neurotoxin--from Vaccines

Synopsis

From New York Times bestselling author Robert F. Kennedy, Jr., comes a science-based call for the immediate removal of the dangerous mercury-containing preservative Thimerosal from vaccines. Over a decade ago, following a sharp rise in developmental disorders such as autism and ADHD, the mercury-containing preservative Thimerosal was widely believed to have been eliminated from vaccine supplies in the United States and abroad. However, dangerous quantities of Thimerosal continue to be used, posing a significant threat to public health and leading to a crisis of faith in vaccine safety. In this groundbreaking book, Robert F. Kennedy, Jr., examines the research literature on Thimerosal and makes a very clear statement about its potentially dangerous effects. In the past, the CDC, FDA, NIH, and AAP, as well as the US Congress, the American Academy of Family Physicians, the US Department of Agriculture, the European Medicines Agency, and the California Environmental Protection Agency have expressed concerns over the use of Thimerosal in vaccines. But despite the many voices calling for action, the media and policy makers have repeatedly failed to adequately address the issue. Now, with *Thimerosal: Let the Science Speak*, the science supporting the elimination of this toxic chemical from the world's vaccine supplies, and its replacement with already available safer alternatives, is all in one place. Making this change should increase vaccination rates by restoring the trust of concerned parents in the vaccine program—a program that is so vitally important to public health.

Book Information

Hardcover: 224 pages

Publisher: Skyhorse Publishing (August 4, 2014)

Language: English

ISBN-10: 1632206013

ISBN-13: 978-1632206015

Customer Reviews

Would you expose the unborn child or infant of a loved one to a vaccine containing

mercury, a known neurotoxin, if you knew there were other safer alternatives? Does it make any sense that even though Thimerosal is banned as a topical antiseptic and is considered hazardous waste that can't legally be thrown in the garbage, it is somehow safe to inject into pregnant women and babies?

• MARK HYMAN, MD, founder and medical director, UltraWellness Center; chairman of the board, Institute for Functional Medicine; The evidence of Thimerosal's neurotoxicity is so overwhelming that anyone who is willing to read the science must conclude that Thimerosal can cause brain damage.

• ROBERT F. KENNEDY, JR., JD, LL.M., clinical professor of environmental law; codirector, Pace University School of Law Environmental Litigation Clinic; When vaccines contain the potent toxin mercury, they can harm public health while they protect it. This is a serious paradox and an error. I hope and implore that this book's overwhelming scientific evidence moves us all to do whatever it takes to correct this error, because it is unnecessary, and it can and must be corrected.

• MARTHA R. HERBERT, PhD, MD, assistant professor of neurology, Harvard Medical School; pediatric neuroscientist, Massachusetts General Hospital; Many of the CDC's own studies have demonstrated a link between increased Thimerosal exposures and the development of vocal and motor tics, which are generally recognized as autism-like features. This alarming association has been downplayed to the public. Sadly, public health agencies' insistence on Thimerosal's safety has effectively inhibited objective investigations into research misconduct and conflicts of interest within health agencies and the vaccine industry.

• CONGRESSMAN BILL POSEY, four-term congressman in Florida; It's no easy task to counter the well-funded astroturf campaigns and endless misinformation passed along by propagandists (and even the well-intentioned-but-misinformed). But Bobby Kennedy continues to do just that—confronting corruption, censorship, and a federal government co-opted by the pharmaceutical industry.

• SHARYL ATTKISSON, investigative journalist; author, Stonewalled; Kennedy shows in great detail how the pharmaceutical industry has completely brainwashed the mainstream media and medical community; As the parent of an autistic child who obviously developed brain damage as a reaction to a vaccine, I ask you to throw away your preconceptions and read the facts.

• AIDAN QUINN, actor

Robert F. Kennedy, Jr., JD, LL.M., is senior attorney for the Natural Resources Defense Council, chief prosecuting attorney for the Hudson Riverkeeper, and president of Waterkeeper Alliance. He was named one of Time magazine's Heroes for the Planet for his success in helping restore the Hudson River, and he continues to fight for environmental issues across the Americas.

He is the bestselling author of *Crimes Against Nature*. Mark Hyman, MD, is chairman of the board of the Institute for Functional Medicine. In addition to being a practicing family physician, he has worked with the Clinton Global Initiative, the World Economic Forum, and many other organizations on global health issues. He is the author of several New York Times bestsellers including *The Blood Sugar Solution* and *The UltraMind Solution*. Martha R. Herbert, PhD, MD, is an assistant professor of neurology at Harvard Medical School, a pediatric neuroscientist at the Massachusetts General Hospital in Boston, and an affiliate of the Harvard-MIT-MGH Martinos Center for Biomedical Imaging.

I briefed Bobby Kennedy Jr originally on the scientific fraud in the mercury amalgam and vaccines: He has bravely stood up, as most large law firms appear to have conflicts of interest as their clients make hundreds of billions on these highly neurotoxic products. Now launching **WORLD MERCURY PROJECT**, he is exposing the callous disregard (another excellent book) of Big Pharma in its greed that knows no bounds. Read this book, and you will see the evidence.

Vaccines kill and destroy lives. Look up the current cdc schedule for children now compared to in 1980s. Autoimmune issues are on the rise. ADD, ADHD, eczema, asthma, allergies, autism. Look into what thimerosal does to the human body. Just because you think thimerosal was removed from vaccines, do you realize what took its place? **ALUMINUM!!** This book is great please read it before you decide to vaccinate your child.

If only more people took an interest in their health. A book that needs to be read by more.

An incredibly readable and important book. Every parent, caregiver, medical worker, politician and therapist should read the scientific evidence about the ingredients in vaccines that make them unhealthy and dangerous for ourselves and our children. I would bet it also applies to our animals. Other countries seem to take a more sensible approach to their vaccines and vaccination schedules. However, in the US, the tail is wagging the dog and the regulatory agencies have ignored scientific evidence and our lawmakers have backed them up to the point we are poisoning ourselves. The problems with the studies that promote dangerous vaccines are completely explained, as are the conflicts of interest of the researchers who did the studies. As Kennedy explains, this should not be a pro-vaccine or anti-vaccine issue but a safe vaccine versus dangerous vaccines that anyone with half a brain should not support or accept. This book is very

well laid out, very easy to read and understand. It gives you all you need so you may ask intelligent questions to make your own informed decisions. In my opinion, the only people who could give this book a less than 4 star review either have not read it or are being paid by the drug companies making fortunes from making us ill.

A must-read landmark book provided vital information based on real science.

When I ask for a nickel-free earring because I noticed that nickel causes a rash and inflammation on my ear, no one hysterically accuses me of being "anti-earring". When you are evaluating the messages here, which you must do for the sake of your child's health, think about this:--98% of people who want to get thimerosal out of vaccines are NOT "Anti-Vaccine" they want vaccines to be safer--And yet, you will notice that there are hysterical straw man arguments made accusing people who want safer vaccines to be 'anti-vaccine'. Start there. Why would ANYONE slam the parent of an autistic or brain-injured child and misrepresent their story and their wish unless they had an either religious fervor about vaccines or a financial interest or a desperate wish to hide the truth? If they are really concerned that people will stop vaccinating if they learn that vaccines have dangerous ingredients, then why not join us in making vaccines safer? There is no explanation for their rabid denial that poisons in vaccines are not a good idea, and their continual misrepresentation of this. Except a desperate wish to avoid blame or financial loss. Or simply a desperate wish to be correct. But what motivates parents of vaccine injured children and environmentalists like RFK Jr? Common sense and dozens of studies you can find in his book. And a wish to never see another babbling child anywhere in the world, become silent, as so many parents of mercury -poisoned have. It's a poison. It's in vaccines. Get it out! Enough said!!!!--Read the arguments of those who realize that poisons are not a good idea in vaccines, and that some children are in fact harmed by them. These folks, despite suffering greatly due to a vaccine-injured child, do not generally get hysterical. They quote science--as RFK Jr does. They are polite despite being attacked and misrepresented. They are motivated by an ethical desire to prevent other families from suffering unnecessarily as they have. And they do not misrepresent the argument of others. They say "Make Vaccines Safer". Why is that such a dangerous concept? "I want safer highways" does not equal "Anti-Highways" "I want organic tomatoes" does not equal "Anti-Tomatoes". Saying "My child reacted to peanut butter" does not mean you hate peanut butter. Which side is trying to hysterically shut down all debate? The side that does not have the truth on its side. Vaccines contain dangerous ingredients. There is no excuse for this. And so, those who shout down people who want to make them safer, have nothing to

support them but bullying and cruelty. They trot out attacks against Jenny McCarthy--whose son had SEIZURES immediately after vaccines--and yet is not "anti vaccine" but campaigned for SAFER GREEN Vaccines (if you don't believe me google it.) They say that Dr. Andrew Wakefield started the debate, because they want to remind other doctors of what will happen to them if they speak their truth, but it was a group of brilliant scientific Moms who made the connection between adding more and more doses of vaccines with mercury increased the autism rate. . Think about who is saying what, think about how RFK Jr's book has fact after fact after fact after study after study, and all they have is ridicule and misrepresentation.. Read the facts. Read them and weep. And then lets' stop injecting pregnant women and babies with mercury. Let's stop. This is crazy. It has to stop.I want to add one more thought:I know that so many people, like the trolls, the media and their minions, don't give a flying blank about what happened to our children, and don't want to believe it, and are happy to pretend we are crazy to say that neurotoxins are neurotoxins--because they only happened to hurt OUR children who can't excrete the mercury and aluminum very well. Presumably their children are fine--though I would submit that it hurts everyone, just as lead does. It's just a matter of degree.But what about the fact that every time people, old or young, get a flu shot, that 25 mcg of mercury is either released in to the sewage system if they happen to be a good excretor, to poison fish and wildlife, or realeased into the groundwater when the person dies and get buried, or gets released in the air if they die and get cremated? And what about all those toxic diapers they get to change if their child happens to be an excetor. . they end up in the landfill, but they get exposed to all that --well---toxic crap. No wonder the babies get such horrible diaper rash. . . And it goes to the landfill in diapers if they have paper ones, and if they are trying to be environmentally correct with cloth diapers, it goes back in the water. . . HOW CAN THIS BE OKAY WITH ANYONE? DUH. WAKE UP. We are allowing a single lazy industry to poison us inside and out.Wanted to add this:Just wanted to point out this govt site to those who think vaccines are harmless:<http://www.hrsa.gov/vaccinecompensation/vaccinetable.html>

The truth is scary. We knew the children were being damaged, now we the truth.
