Creating butterfly gardens, growing plants that attract lepidoptera, is a common British practice. Tekulsky here brings how-to instructions across the Atlantic. He begins with an informative, simple description of the lives and habits of some 50 common butterflies, giving gardeners much of what they need to know; then he explains the variety of plants daisies, marigolds, dogwood, etc. that provide butterflies with food and nectar. He offers good advice on how to lure butterflies and how to turn the garden into a haven for them: selecting sunny spots, providing shelter from the wind, assuring abundant drinking water. An appendix describes butterfly migration, nectar preference, habitats, etc. and lists sources for supplies and further information. Illustrations not seen by PW. a good book

Great

This little gem of a book is a reader not a looker. It is very important reading for those just beginning

butterfly gardening. It would seem as though Mathew Tekulsky has answered every question with a short to the point yet informative answer. Chapters cover understanding gardening for butterflies by understanding butterflies. Mr. Tekulsky instructs us on all aspects of how to get started, including which plants are needed for both larval food and nectar food. There is a chapter devoted to activities which include photography hints, things to do with kids and building hibernation boxes. Extensive appendices list 50 Common butterflies, and where they are found and what plants they like. There are also lists of where to obtain butterflies and entomological equipment, as well as, butterfly organizations and recommended further readings.

Oh! This book is really great, I have read it when I was in high school and it really has made results when I built my green house.
